

## Edit Image Properties

When you want to slightly resize an image, put a colored border around it, place your text to the right of it, or any of several other things that you might want to change, you can right-click on the image while in the Visual Editor and choose Properties from the drop-down menu. Play around with the different controls and you'll find out just how much you can do to make your images stand out and look better without ever going to the HTML side.

For those of you who do work in the HTML code, the Properties menu inserts the newest supported code that will remain more stable across multiple browsers.

The image below shows the different options that are available in the Properties window. There are quite a few controls that you might not have been aware of before, so check it out!
