

## INTRODUCTION

---

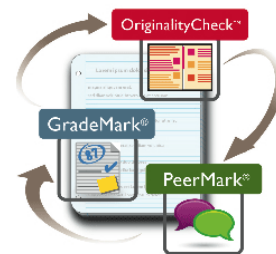

### STUDENTS

The documents in this section of the Turnitin Training Web Page will explain to students how to access Turnitin an anti-plagiarism program. It will walk them through the steps for setting up a user profile and how to submit a paper. It will also explain how to mark papers using the PeerMark module of Turnitin. In some cases, a user profile may be created by an instructor. If that is the case, a message will be sent to the student by Turnitin specifying a temporary password.

### FACULTY

Turnitin is an anti-plagiarism program. It integrates three essential instructional support tools. These include OriginalityCheck plagiarism prevention, GradeMark paperless grading, and PeerMark peer reviewing. With Turnitin, the instructor can:

- ✦ Work with a single, “all-in-one” view of a student’s paper in its original format. This includes styled text, graphics, and photos.
- ✦ Save time and increase productivity with improved tools and unified user interface.
- ✦ View feedback from all sources in one comprehensive, multi-layered view.
- ✦ Maintain academic integrity and engage students in their development as learners.

With **Plagiarism Prevention** it is possible to see the Originality Report for a submitted paper in its original format including styled text, graphics, and photos. The instructor can access all the tools needed to provide feedback on the paper. The **OriginalityCheck** results are layered with GradeMark and PeerMark comments.

**Peer Reviewing** with **PeerMark** allows students to receive significant cognitive benefits from viewing feedback from multiple sources. It is possible for students to comment on the papers of other students in the course.

**Paperless Grading** using **GradeMark** makes it easy for instructors to add comments on highlighted matches and questionable citations. A unified library of markup tools is provided. These tools include simplified highlighting and frequently used drag-and-drop comments. The program allows for the creation of custom rubrics.
