

CHANGE THE CAPTION PROPERTY

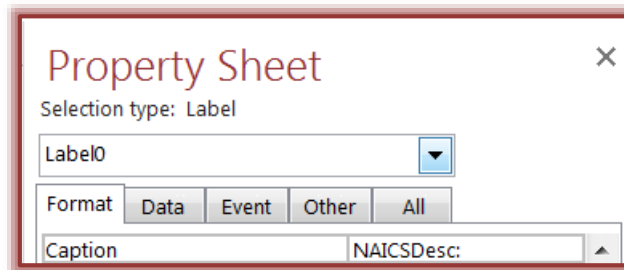

This lesson will use the **Jobs** database.

The Caption property is used to control the text that appears in the label for the fields. The default Caption property value for a Bound field is the Field Name followed by a colon.

- Open the **Potential Income** report from the **Jobs** database in **Design View**, if necessary.
- Make sure the **Report Design Tools, Design Tab** is selected.
- Click the **Property Sheet** button in the **Tools Group**.

- Click the **NAICSDesc** label in the **NAICS Header** section of the report.
- The heading for the properties box should change to **Label** with a number after it (see illustration below).

- Click in the **Caption** box and put a space before the word **Desc** and spell out the word so that the caption reads **NAICS Description**.
- Complete the same process to change the **Caption** for the spacing and spelling for all the other headings, where necessary.
- Click an empty area of the grid to deselect any selected controls.
- Resize the headings as necessary to display the complete label.
- Save the report.
