

SMART BOARD INTERACTIVE WHITEBOARD FEATURES

The SMART Board is packed with features that will make a presentation powerful. With the SMART Board, you can:

- ✦ Create and edit a wide variety of annotation objects using the Pen Tray.
- ✦ Capture an image of the annotation with the press of a toolbar button.
- ✦ Use the SMART Board recorder to capture a video image of everything that is done on the interactive whiteboard.
- ✦ Use a microphone to include audio in sync with the data on the interactive whiteboard.
- ✦ Save, print, or e-mail a complete record of everything that has been written, drawn, or typed into the SMART Notebook software.
- ✦ Save a Notebook file as a .PDF file. This feature is only available when the Windows operating system is being used.
- ✦ Save a series of image files or HTML files that can be viewed on the Web.
- ✦ Use an on-screen keyboard to enter text right at the interactive whiteboard. This eliminates the need for a conventional, physical keyboard.
- ✦ Use touch shortcuts to advance through PowerPoint presentations while standing at the interactive whiteboard.
- ✦ Use the handwriting recognition feature to convert handwritten text into typewritten text. This feature is available only with the Windows operating system.

The SMART Board interactive whiteboard is touch sensitive. It operates as part of a system that includes a computer and a data projector. When using the SMART Board:

- ✦ The computer sends an image of an application to the projector.
- ✦ The projector casts the image onto the SMART Board.
- ✦ The SMART Board acts as the monitor as well as an input device.
- ✦ An application is controlled by simply touching the SMART Board.
