

SoftChalk-Activities Overview

There are twenty-one different types of Activities available in SoftChalk. All the activities are mobile friendly. All Lessons auto-format for the device being used. The lesson can not only distinguish between a mobile device and a computer, but also among different mobile devices. Students do not have to download any apps on the mobile device to access SoftChalk lessons.

Depending on the browser being used, the activity can come up in either HTML 5 format or in a Flash-based format. Activities opened in Internet Explorer 8 would come up in a Flash-based format, whereas, Internet Explorer 9, Firefox, and Safari would display the activities in HTML 5 format.

For information on how to preview lessons formatted for smaller mobile devices, please see the Mobile Devices documentation on the SoftChalk page of the Training Web Site.

IMAGES

Images can be used in some of these Activities. These images can be added from a file on your computer or from the SoftChalk Library. (See the Library document on the SoftChalk page of the Training Web Site for how to use this feature.)

INSERT ACTIVITIES

Activities can be inserted anywhere within a lesson. Text can be pasted from other programs into an Activity. You can enter as many Activities as you like into a lesson and you can keep track of student scores on the different activities.

COPY TO OTHER LESSONS

Activities cannot be copied from one lesson into another lesson. However, an Activity can be saved to the Library and then inserted into another lesson. It is also possible to import and export text lists for certain Activities.
