The YouTube Video Element is used to embed YouTube Videos directly into your Web site. This element is available with the Free Account as well as the Pro Version.
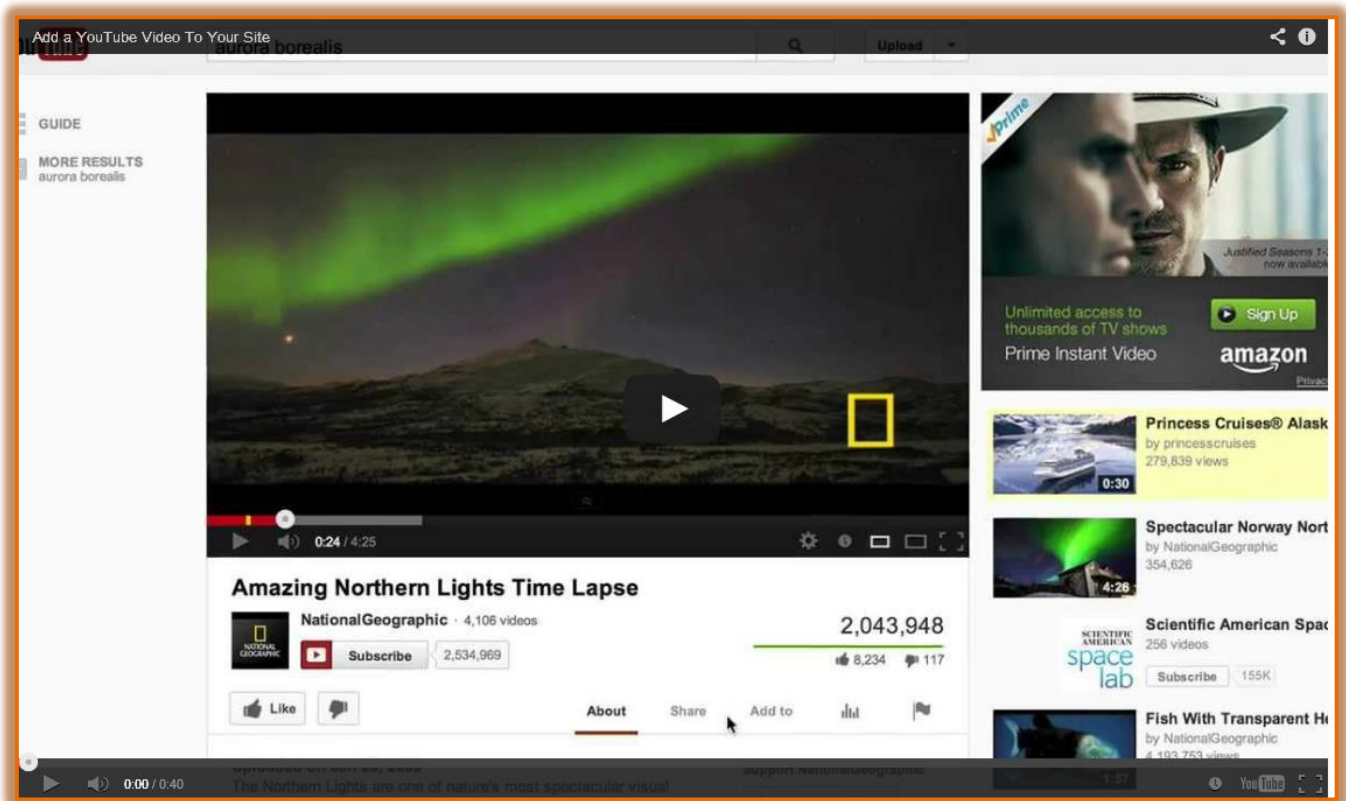

✞ Click the **Build** tab, if necessary.

✞ In the **Sidebar** on the left, scroll down to the **Media** area.

✞ Drag the **YouTube** element to the page where the **YouTube Video** is to   be embedded.

✞ The **YouTube Video** element will appear on the page (see illustration below).

✞ Click anywhere within the **YouTube Element** to display the **YouTube Toolbar**.

✞ In the **YouTube Video URL** box (see illustration on next page), input the direct link to the **YouTube Video**.

✞ To locate the Direct Link:

   ↶ Open the **Browser** window.

   ↶ Input **YouTube.com** into the **Browser Address Bar**.

   ↶ Search for the **Video** that is to be embedded into the page.

   ↶ Once the **Video** is located, click the **Share** button beneath the **Video**.

   ↶ Copy and paste the link from there.

      ⌅ No other link will work for embedding the **Video**.

      ⌅ Make sure you use the one found in the **Share** area (see illustration below).

✤ Once the link is added, the video should show up on the page in less than a minute.
  ◌ If the Video doesn't display, then it means you didn't use the Direct Link.
  ◌ Double-check that the correct link was copied.

✤ Click the **Advanced** link to specify the size for the video. The options here are **Small**, **Medium**, **Large**, **Extra Large, HD,** or **Auto**.
✤ Click the **Position** list arrow to select from **Left**, **Center**, or **Right**.
✤ Click the **Spacing** link to specify the **Top** and **Bottom** margins for the **YouTube Element**.

NOTE: For **additional information** about working with **YouTube Videos**, check out **Weebly Help**.
