When pages are added to a Web site, they appear in the site's Navigation Menu. They are also stacked in a list under the Pages tab. Where a page appears on the Pages tab directly controls where it will appear in the Navigation Menu.

✝ Click the **Pages Tab**.
✝ Select the page that is to be moved to a different location in the site.
✝ Click and drag it to a new location in the Page list.
✝ Click the **Save Settings** button to apply the changes.

**NOTE:**
✝ The Page list seen in the image above left will result in a **Navigation Menu** that looks like the one in the image below.

✝ Creating Subpages and moving pages to different locations in the Page list as shown in the image above right will result in a **Navigation Menu** that looks like the one in the image below.

✝ Move the mouse pointer over the **Assignments** link to view the subpages.
